Lab – add System Service

1. Extract the file lab2.tar.bz2 in ~/aosp/device/generic/goldfish

   tar –xvf ./lab2.tar.bz2

2. Complete the TODO tasks in the source files

3. To test your work use mm command in app and framework folders

4. Edit core.mk (build/target/product/generic) to add the packages:

   com.android.fibservice
   com.android.fibservice.xml
   FibServiceApp
   Libfib_jni

5. Build the ROM and run the emulator, chack that fibservice is running with
   system privileges

6. Write a client application and run it on the custom rom

   Use the manager object to access the service
   Add uses-library to AndroidManifest.xml
